ABSTRACT

Johnson County Community College conducted a study in 1997 to obtain information about available support services for deaf and hard of hearing students at postsecondary institutions, and to gather information on the role of deaf professionals at postsecondary institutions. Surveys were mailed to 650 participants obtained from the Association on Higher Education and Disability (AHEAD) mailing list, and the College and Career Programs for Deaf students. A total of 248 usable surveys were returned. This report contains information on full- and part-time employees, involvement in decision making, recruitment of deaf employees, providers of students services, student enrollment, grant support programs, interpreters for campus events, profile of participating institutions, and two-/four-year institutions. Major findings indicate that, on average, responding institutions had 4 full-time deaf or hard of hearing employees and an additional 3 part-time employees, which represents a small proportion of the average number of total employees per institution (1270 full-time and 752 part-time). In each of four job categories, faculty had the highest representation of deaf employees, averaging 2.3 per institution, followed by service/maintenance employees (mean=1.4), office/technical employees (mean=1.2), and administrative employees (mean=0.9). The average enrollment of deaf or hard of hearing credit students is 19.8 students. One-fifth of the institutions offer no sign language classes, while 58% offer such courses for credit and 41% offer noncredit classes. Tabled results and the questionnaire are appended. (AS)

Introduction and Methodology

Introduction

The body of information about the deaf and hard-of-hearing student population is continually but slowly growing. However, very little information was available on the subject of the role of the deaf professional in higher education.

The survey is a culmination of a process which began in Fall 1996 at the request of Kim Brown-Kurz, Education Specialist, and Rick Moehring, JCCC counselor.

The objectives of this study were to:

- 1. Obtain information about available support services for deaf and hard of hearing students at postsecondary institutions
- 2. Gather information on the role of deaf professionals at postsecondary institutions

Methodology

The target population selected for the study was a combination of two sources. Rick Moehring and Kim Brown purchased the Deafness Special Interest Group mailing list from the Association on Higher Education and Disability (AHEAD) and combined it with the list of programs that serve deaf people from "College and Career Programs for Deaf Students" published by Gallaudet University. They merged the two lists, eliminated duplications, removed what appeared to be home addresses, and in some cases on Gallaudet's list, changed the addressee from 'admissions office" to the "office for students with disabilities." The list that resulted contained 650 names and addresses.

Two mailings of 650 surveys each were completed. The first mailing was sent first class on June 13, 1997. The second mailing was sent third class on June 25, 1997. Because the survey was distributed during the summer, surveys returned through the end of September were processed and included in the survey results. This allowed individuals on ten-month contracts to complete the questionnaire once they returned to work at the beginning of the school term. A total of 248 usable surveys were returned for a response rate of 38.2%.

Please direct any comments about this survey to:

Employees

How many full-time and part-time employees do responding institutions have?

The average number of full-time employees reported by the institutions was 1270. The average number of part-time employees was 752 (see Table 1, Appendix A, and Figure 1, below.)

A wide variety of sizes of institutions (as measured by number of employees) was represented. Most prevalent were institutions with fewer than 500 employees, which comprised about 45% of responding institutions.

A significant percentage (about one-quarter) of respondents didn't know the approximate number of total employees at their institutions.

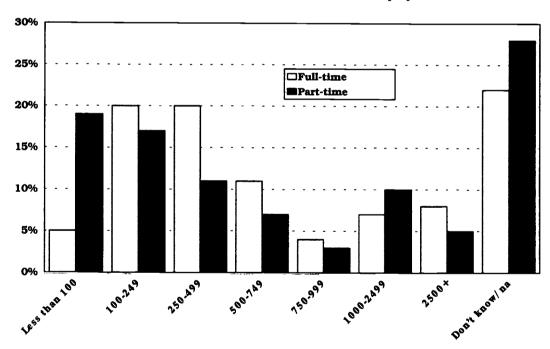

Figure 1
Number of Full-time and Part-time Employees

Employees - Deaf and Hard of Hearing

How many employees are deaf and hard of hearing?

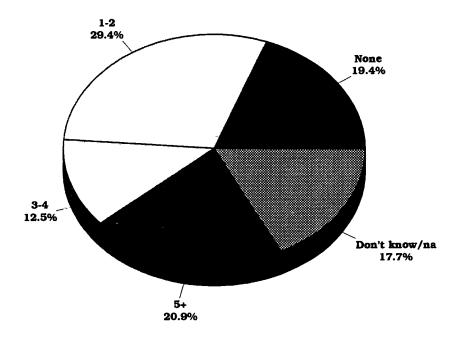

On average, responding institutions had four full-time deaf or hard of hearing employees and an additional three part-time employees (see Table 2, Appendix A, and Figure 2, below). This represents a small proportion of the average number of total employees per institution (1270 full-time and 752 part-time).

About 20 percent of the institutions didn't know how many deaf and hard of hearing individuals (full-time or part-time) were employed by their institution.

Full-time employees

Approximately 20 percent of the institutions responding had no full-time deaf or hard of hearing employees. Another eighteen percent of the respondents didn't know how many deaf and hard of hearing employees worked for their institution. About 30 percent employed 1-2 deaf or hard of hearing individuals full-time. Thirteen percent employed 3-4 deaf or hard of hearing employees full-time. One in five institutions had five or more full-time deaf or hard of hearing employees.

Figure 2
Number of Full-time Deaf and Hard of Hearing Employees

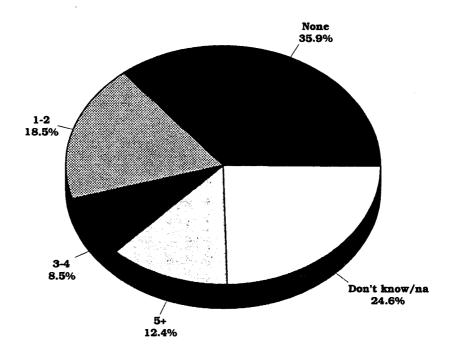

3 . 8

Employees - Deaf and Hard of Hearing (cont'd)

Part-time employees

Almost one-quarter of the respondents said they didn't know how many part-time employees at their institution were deaf or hard of hearing (see Table 2, Appendix A and Figure 3, below). Thirty-six percent indicated their institution had no deaf or hard of hearing part-time employees. Nineteen percent of the institutions had 1-2 deaf or hard of hearing part-time employees, nine percent had 3-4, and the remaining 12 percent had five or more deaf or hard of hearing part-time employees.

Figure 3
Number of Part-time Deaf and Hard of Hearing Employees

Employment by Job Category

In which job categories were deaf and hard of hearing individuals most commonly employed?

Faculty had the highest representation of deaf or hard of hearing employees, averaging 2.3 per institution, followed by service/maintenance employees (mean=1.4), office/technical employees (mean=1.2), and administrative employees (mean=0.9). (See Table 3, Appendix A, and Figure 4, below.)

Twenty percent of the respondents were not able to estimate how many deaf or hard of hearing employees at their institutions were in the four selected job categories.

About 20 to 25 percent of the institutions had 1-2 employees in each of the four job categories.

Who do campuses consult on decisions for programs and services for deaf and hard of hearing students?

Routinely, deaf and hard of hearing students are consulted over 60 percent (63%) of the time (see Table 4, Appendix A, and Figure 5, below). Deaf and hard of hearing individuals in the community are contacted about one-third of the time (35%) and deaf and hard of hearing employees are consulted just under 30 percent (29%) of the time. Nearly one in five (18%) of the respondents said that none of these are consulted and almost one in ten (9%) didn't know who was consulted when these decisions were made.

Figure 5
Groups Consulted on Decisions Regarding Programs and Services for Deaf and Hard of Hearing Students

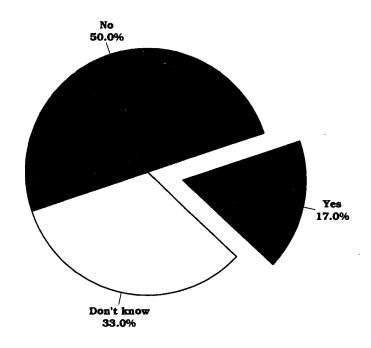

Recruitment of Deaf & Hard of Hearing Employees

What proportion of institutions actively recruit deaf & hard of hearing employees?

Roughly one out of six (17%) of respondents indicated that active recruitment of deaf & hard of hearing employees occurred at their institutions (see Table 5, Appendix A, and Figure 6, below.) Half (50%) indicated that their institutions did not actively recruit deaf & hard of hearing employees. One-third (33%) were not sure whether their institutions actively recruited deaf & hard of hearing employees.

Figure 6
Does Institution Actively Recruit Deaf & Hard of Hearing Employees?

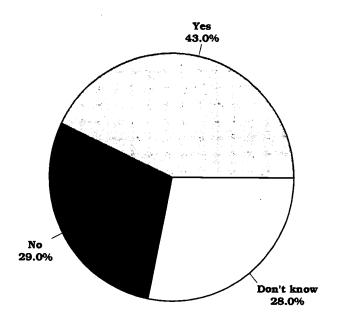

Should More Importance Be Placed on Hiring Deaf & Hard of Hearing Individuals?

Do representatives of deaf higher education programs personally feel that more importance should be placed on hiring deaf & hard of hearing individuals?

Over 40 percent (43%) of respondents answered that their institution should place more importance on hiring deaf and hard of hearing individuals, 29 percent said it shouldn't, and 28 percent responded that they didn't know (see Table 6, Appendix A, and Figure 7, below).

Figure 7
Does Respondent Personally Feel That Their Institution Should Place More Importance on Hiring Deaf and Hard of Hearing Individuals?

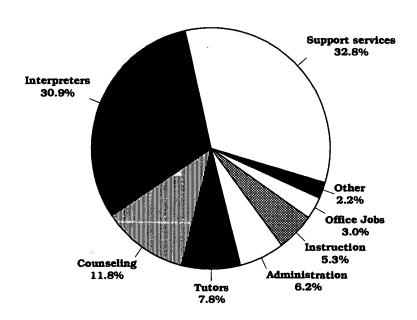

Providers of Student Services

What are the primary job categories held by providers of student services for deaf & hard of hearing students?

The 248 respondents listed a total of 899 jobs for providers of services for deaf & hard of hearing students at their institutions. These jobs fall into three main categories: disabled student support services (33%), interpreters (31%), and counseling (12%). (See Table 7 and Figure 8, below). Eight percent were tutors, six percent of the jobs were in general administration, and five percent were in instruction.

Figure 8

Job Categories for Providers of Support Services for Deaf & Hard of Hearing Students

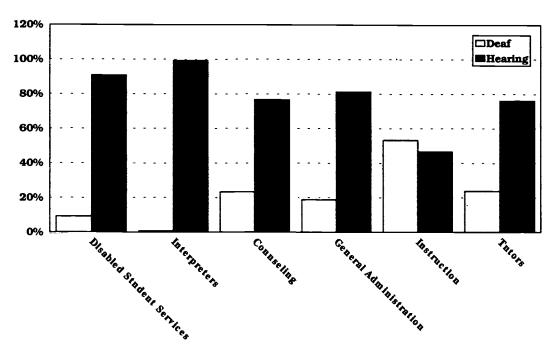

Providers of Support Services (cont'd)

What are some characteristics of providers of support services for deaf & hard of hearing students?

- Just under 60% are employed full-time; 41 percent are employed part-time (see Table 7, Appendix A)
- Seven in ten providers sign for themselves; three in ten use an interpreter (see Table 7, Appendix A).
- ♦ Twelve percent of the providers are deaf or hard of hearing; 88 percent are hearing (see Table 7, Appendix A, and Figure 9, below). The greatest representation of deaf providers is in the job category instruction (53%), followed by tutors (24%), and counseling (23%).

Figure 9
Major Job Categories of Providers of Support Services for Deaf & Hard of Hearing Students by Whether Provider is Deaf or Hearing

Counselors

How many counselors/advisors are available at responding institutions?

Number of Counselors in the Institution

The median number of counselors/advisors working in the institutions surveyed was 13 (see Table 8, Appendix A).

Counselors Providing Advising for Deaf & Hard of Hearing Students

The median number of counselors/advisors providing advising for deaf and hard of hearing students was two (see Table 8, Appendix A). Almost two-thirds of the institutions surveyed had one to four counselors providing advising for deaf and hard of hearing students. Twelve percent had five to nine counselors. One out of six institutions had ten or more counselors. Seven percent had no advisors to serve deaf or hard of hearing students.

Counselors Providing Personal Counseling Services

The median number of counselors providing personal counseling services (as opposed to strictly academic counseling) was four (see Table 8, Appendix A). Ten percent of the institutions had none, over sixty percent (63%) had 1-9 counselors, and 27 percent had ten or more counselors.

<u>Counselors Providing Personal Counseling Services for Deaf & Hard of Hearing Students</u>

The median number of counselors providing personal counseling services for deaf & hard of hearing students was one. Almost one-quarter (24%) of the institutions had none and an additional 61% had one to four (see Table 8, Appendix A).

Counselors Skilled in Sign Language

Over half of the responding institutions had no counselors skilled in sign language (see Table 8, Appendix A). Forty-five percent had from 1-9 counselors skilled in sign language; the remaining three percent had ten or more counselors skilled in sign language. The median was zero counselors skilled in sign language.

Deaf or Hard of Hearing Counselors

Nearly eight out of ten (77%) of the institutions had no counselors who were deaf or hard of hearing, twenty percent had from one to four deaf or hard of hearing counselors, and the remaining four percent had ten or more counselors (see Table 8, Appendix A). The median for the institutions surveyed was zero.

(Note: for all the questions asked regarding counselors, there was a significant percentage (10 to 20 percent) of respondents who didn't know the number of counselors in their institution.

Challenges Faced by Institutions

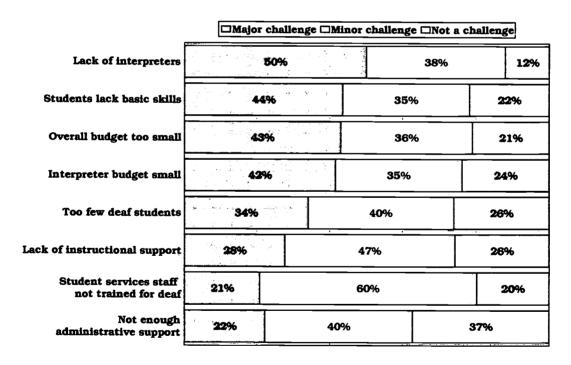

What are the greatest challenges in providing services for the deaf & hard of hearing?

Clearly, the biggest challenge is the lack of availability of interpreters (see Table 9, Appendix A, and Figure 10, below). Half of responding institutions marked it as a major challenge, thirty-eight percent said it was a minor challenge, and only twelve percent indicated it was not a challenge at all .

The next three most important challenges include: students lacking basic skills, an insufficient overall budget, and an insufficient budget for interpreters.

All but one of the challenges listed were considered either a major or minor challenge by about three-quarters of the respondents. Lack of administrative support was listed as a challenge by nearly two-thirds (62%) of the respondents.

Figure 10 Challenges for Institutions in Providing Services for Deaf & Hard of Hearing Students

Credit Student Enrollment

How many students, total and deaf and hard of hearing, are enrolled in participating institutions?

Total Credit Student Enrollment

Credit student enrollment for responding institutions is detailed in Table 10, Appendix A, and Figure 11, below. Almost forty percent have fewer than 5000 credit students, 14 percent have between five and ten thousand credit students, almost one-third have between ten and twenty thousand credit students, and the remaining 16 percent have twenty thousand or more credit students.

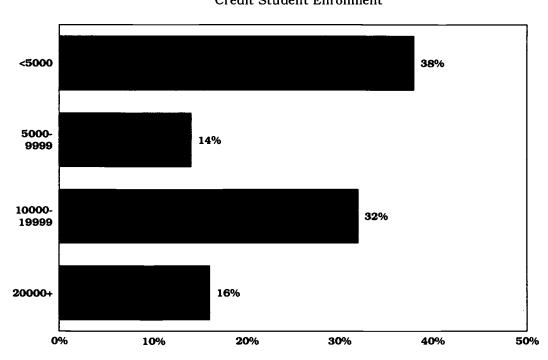

Figure 11 Credit Student Enrollment

Deaf Student Credit Enrollment

The average enrollment of deaf or hard of hearing credit students is 19.8 (see Table 11, Appendix A). Almost 20 percent of respondents had 30 or more deaf or hard of hearing credit students. Forty-three percent had less than ten deaf or hard of hearing students enrolled. Over one-quarter (26%) had from 10-19 deaf or hard of hearing credit students. The remaining 12 percent had 20-29 deaf or hard of hearing students.

 $13\,18$

Years Institution Has Served Deaf/Hard of Hearing Students

How long have participating institutions served deaf and hard of hearing students?

On average, responding institutions have served deaf and hard of hearing students for 18 years (see Table 12, Appendix A, and Figure 12, below). Most institutions (almost 75%) have served deaf and hard of hearing students for 10 to 29 years. Eighteen percent had fewer than ten years of service to deaf and hard of hearing students.

Figure 12
Years Institution Has Served Deaf & Hard of Hearing Students

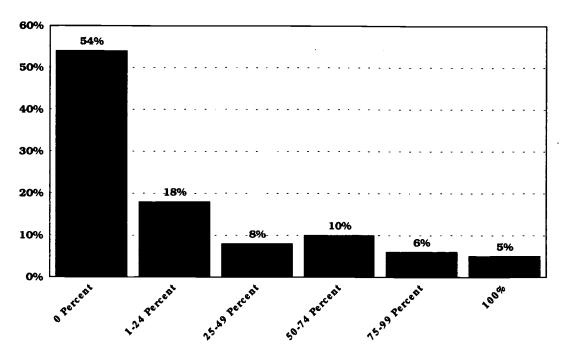

Grant Support of Programs for Deaf & Hard of Hearing Students

How prevalent is grant funding for programs for deaf & hard of hearing students?

Most institutions (54%) had no grant funding for programs for deaf and hard of hearing students, while 5 percent were 100%-grant funded (see Table 12, Appendix A, and Figure 13, below). Twenty-five percent received some grant funding (but less than half). Another one-sixth (16%) received at least half but less than all of their funding from grants.

Figure 13 Percent of Budget for Programs for Deaf & Hard of Hearing Students Funded by Grants

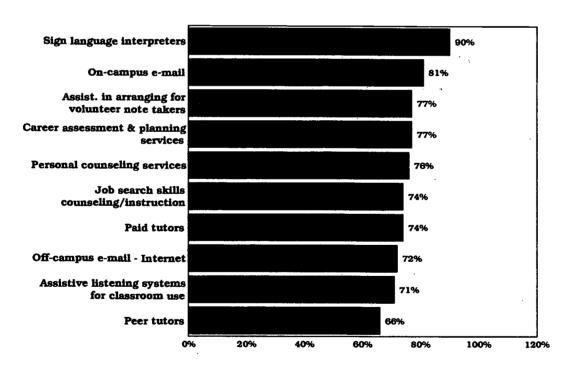

Most Prevalent Support Services

Which support services for deaf and hard-of-hearing students are most prevalent?

- The top ten support services for deaf and hard of hearing students currently available at institutions are listed in Table 13 and in Figure 14, below. They are: sign language interpreters (89.9%), on-campus electronic mail (81.0%), assistance in arranging for volunteer note takers (77.4%), career assessment and planning services (76.6%), personal counseling services (76.2%), job search skills counseling and instruction (74.2%), paid tutors (74.2%), off-campus electronic mail Internet (71.8%), assistive listening systems available for classroom use (70.6%), and peer tutors (66.1%).
- Six of the ten most-prevalent support services are not exclusively available to the deaf and hard of hearing student population; they are available to the general student population as well.

Figure 14
Most Prevalent Support Services for Deaf & Hard of Hearing Students

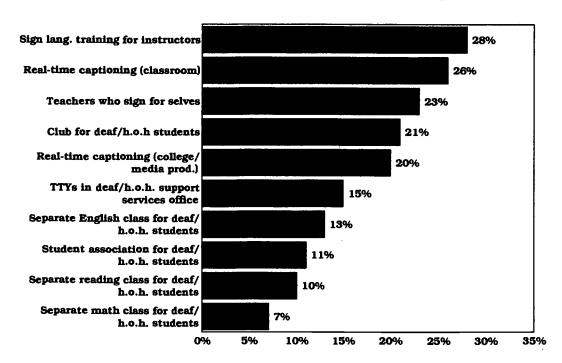

Least Prevalent Support Services

Which support services for deaf and hard-of-hearing students are least prevalent?

Five of the support services listed in the summary are offered by less than fifteen percent of the responding institutions (see Table 13, Appendix A, and Figure 15, below). These include TTYs in a support services office for deaf and hard of hearing students (14.5%), separate English class for deaf and hard of hearing students (12.9%), student association primarily for deaf and hard of hearing students (11.3%), separate reading class for deaf and hard of hearing students (10.9%), and a separate math class for deaf and hard of hearing students (6.9%).

Figure 15
Least Prevalent Support Services for Deaf & Hard of Hearing Students

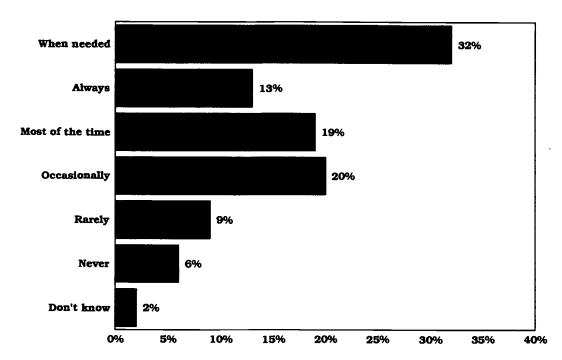

Interpreters for Campus-wide Events

How often are sign language interpreters provided for campus-wide events?

Most responding institutions provide interpreters for campus-wide events such as lectures, plays, and student government meetings - a scant 14 percent said they rarely or never provided sign language interpreters for such occasions (see Table 14, Appendix A, and Figure 16, below). More common was to provide interpreters when needed or requested, the answer given by 32% of the respondents. About one-third provided an interpreter always or most of the time. One-fifth of the institutions provided an interpreter occasionally. The remaining 2 percent didn't know how often interpreters were provided.

Figure 16 How Often Sign Language Interpreters Are Provided for Campus-wide Events

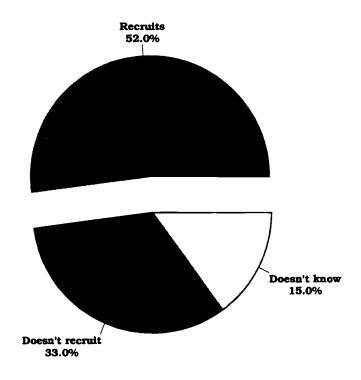

Deaf High School Student Recruitment

How many institutions recruit deaf & hard of hearing students from area high schools?

A majority of the institutions surveyed do recruit deaf & hard of hearing students from area high schools - 52 percent, in fact (see Table 15, Appendix A, and Figure 17, below).

One-third of the institutions do not, and the remaining 15 percent of respondents don't know whether their institution recruits deaf & hard of hearing high school students or not.

Figure 17
Recruitment by Institution of Deaf &
Hard of Hearing Students from Area High Schools

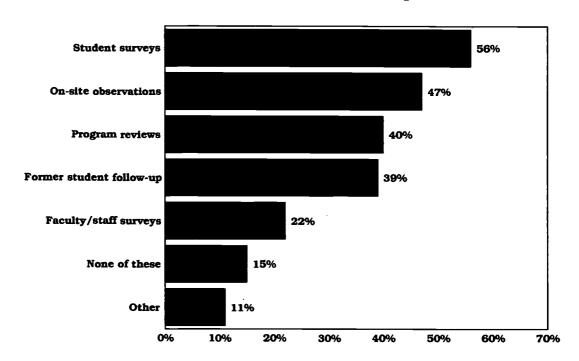

What methods are used to assess the effectiveness of services/programs for deaf & hard of hearing students?

The assessment method cited most frequently was student surveys, used by 56 percent of the responding institutions (see Table 16, Appendix A, and Figure 18, below). Almost half (47%) of the responding institutions used on-site observations by program coordinators. About 40 percent each used program reviews/assessments and follow-up with former students. Surveys of faculty and staff was cited least frequently, used by 22 percent of the responding institutions. Fifteen percent said they didn't use any of the assessment methods listed, and 11 percent used an assessment method other than those listed on the survey.

Figure 18
Assessment Methods Used to Measure Effectiveness of Services/Programs for Deaf & Hard of Hearing Students

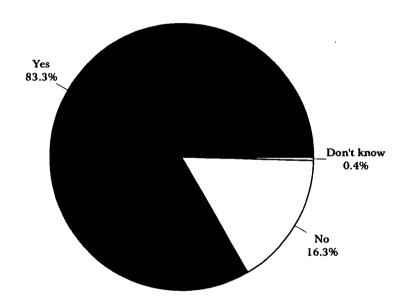

Coordinators of Support Services for Deaf & Hard of Hearing Students

Does the coordinator of support services for deaf & hard of hearing students also coordinate activities for other students with disabilities?

Eighty-three percent of the respondents surveyed said their coordinator of services for deaf & hard of hearing students serves that dual role (see Table 17, Appendix A, and Figure 19, below).

Figure 19
Does Coordinator of Deaf & Hard of Hearing Students
Also Coordinate Services for Other Students with Disabilities?

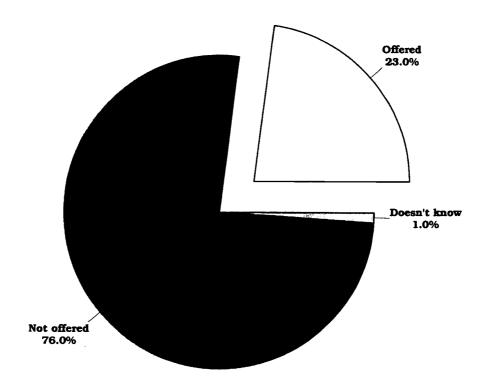

Interpreter Training Programs

How many institutions offer interpreter training programs?

Less than one-fourth (23%) of the institutions offered interpreter training programs (see Table 18, Appendix A, and Figure 20, below). Less than one percent of the respondents didn't know if their institution offered one, and the remaining 76 percent said their institution *did not* offer an interpreter training program.

Figure 20
Interpreter Training Program Offered by Institution

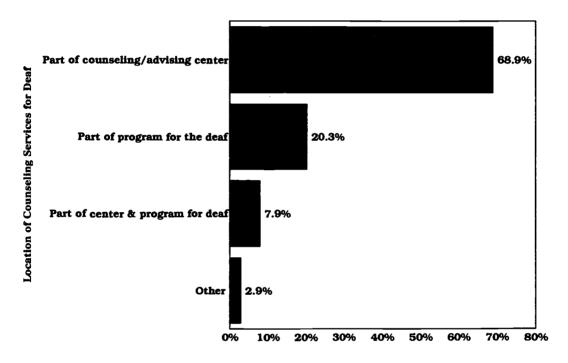

Location of Counseling/Advisory Services for Deaf & Hard of Hearing Students

For most institutions (almost seventy percent), counseling services for deaf or hard of hearing individuals are available at the counseling/advising center (see Table 20, Appendix A, and Figure 21, below). In one out of five institutions, these services are available at a centralized location as part of a program for the deaf. Eight percent of the institutions offer counseling at both locations.

Figure 21
Location of Counseling/Advisory Services for Deaf & Hard of Hearing Students

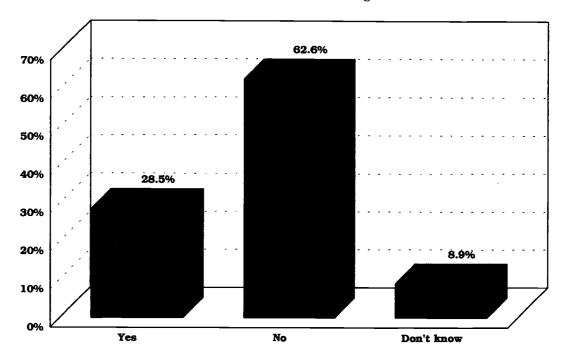

Provision of Deaf Adult Role Models

How many institutions actively seek to bring deaf adults into contact with deaf and hard of hearing students?

Most institutions (63%) do not actively attempt to bring deaf adults into contact with deaf and hard of hearing students (see Table 21, Appendix A and Figure 22, below). Nine percent of the respondents didn't know whether their institution did this, leaving almost thirty percent whose institutions actively attempt to bring deaf students into contact with deaf role models.

Figure 22
Does Institution Actively Attempt to Bring Adult Role Models into
Contact with Deaf & Hard of Hearing Students?

Availability of Sign Language Classes

What types of sign language classes are available?

One-fifth (21%) of the institutions offer no sign language classes (see Table 22, Appendix A, and Figure 23, below). However, fifty-eight percent offer credit sign language classes, 41 percent offer noncredit sign language classes, and 20 percent offer sign language classes through staff development.

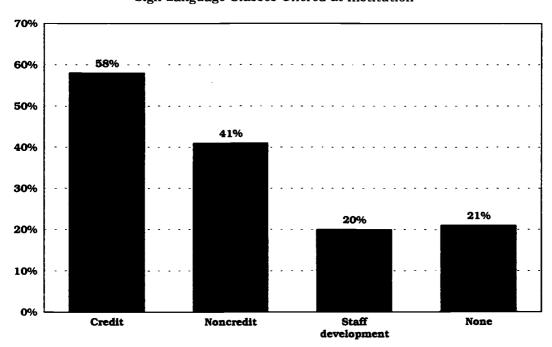

Figure 23
Sign Language Classes Offered at Institution

Profile of Participating Institutions

What is the profile of institutions participating in this study?

Affiliation

Eighty-six percent of the participating institutions were public; nine percent were private, religious schools; and the remaining five percent were private, non-religious schools (see Table 23, Appendix A, and Figure 24, below).

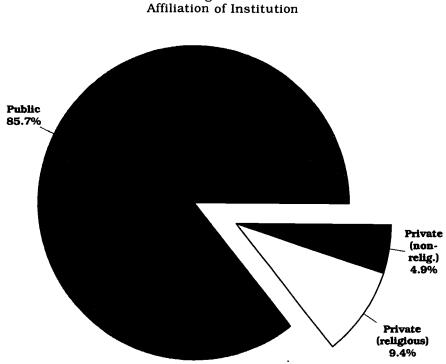

Figure 24

Institution type

About half (49%) of the responding institutions were 2-year institutions, 46 percent were 4-year institutions, and the remaining five percent was characterized as "other" (see Table 24, Appendix A).

Accrediting body

The three most prevalent accrediting bodies for the responding institutions were the North Central Association of Colleges and Schools (37%), the Southern Association of Colleges and Schools (22%), and the Middle States Association of Colleges and Schools (12%). (See Table 24, Appendix A.) Four other accrediting bodies, the Northwest Association of Schools and Colleges/Junior Colleges/Universities, the Western Association of Schools and Colleges-Community/Junior Colleges/Universities, the New England Association of Schools and Colleges-Higher Education, and the Western Association of Schools and Colleges-Technical and Career Institutions represented between four and seven percent (each) of the responding institutions.

Profile of Participating Institutions (cont'd)

Types of programs offered at the institution

Over half of the responding institutions offered vocational/technical, two-year transfer, or liberal arts programs (see Table 25, Appendix A, and Figure 25, below). Liberal arts programming was the most prevalent, offered by two-thirds of the institutions. Almost half (46% and 49%, respectively) offered teacher preparatory and professional programs.

Liberal arts programs 66.5% 56% Two-year transfer Vocational/technical 52.8% Professional programs 48.8% 46.4% **Teacher preparatory** 10% 20% 30% 40% 60% 70% 80% 0%

Figure 25
Types of Programs Offered

... 32

What factors are related to the mean total number of deaf employees?

The mean number of deaf employees (full-time and part-time) for all institutions is 6.2 (see Table 28, Appendix A).

The total number of deaf & hard of hearing employees *increases* as the total number of deaf & hard of hearing credit students and the number of years the institution has served deaf and hard of hearing students *increases* (see Table 28, Appendix A, and Figure 26 and Figure 27, below and on the next page).

Figure 26
Mean Total Number of Deaf Employees (Full-time and Part-time)
by Total Number of Deaf & Hard of Hearing Credit Students

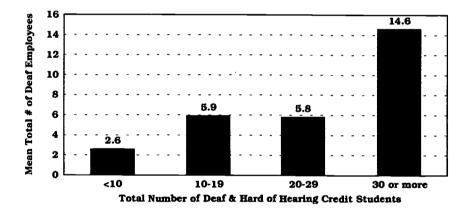

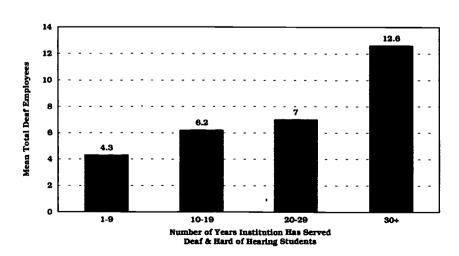

Figure 27
Mean Total Number of Deaf Employees (Full-time and Part-time)
by Number of Years Institution Has Served Deaf & Hard of Hearing Students

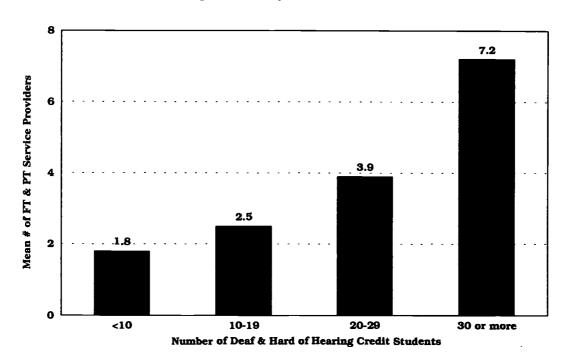

Providers of Deaf Student Support Services

What factors are related to the number of providers of deaf support services?

The average number of full-time and part-time providers of deaf support services is 3.3 (see Table 29, Appendix A).

The number of providers appears to be positively correlated with the total number of credit students and the total number of deaf & hard of hearing credit students (see Table 29, Appendix A, and Figure 28, below).

Figure 28
Mean Number of Full-time & Part-time Providers of Support Services for Deaf & Hard of Hearing Students by Number of Deaf Credit Students

Institutions that have made a commitment to provide support services for deaf & hard of hearing students show their commitment not only in the number of providers of these services, but also in a proactive advocacy role for deaf students.

♦ Institutions at which counseling services are available both at the institution's counseling/advising center and at a centralized location as part of a program for the deaf averaged 6.7 providers of deaf support services, institutions offering counseling services only as part of a centralized program for the deaf averaged 6.0 providers, and institutions offering counseling for deaf & hard of hearing

₂₉ 34

Providers of Deaf Student Support Services (cont'd)

students only at the institution's counseling advising center averaged 2.3 providers.

- ♦ As the frequency of providing interpreters for campus-wide events increases, so does the total number of providers of deaf support services, from 1.3 for "never" to 2.6 for "occasionally" to 5.4 for "always".
- Institutions that recruit deaf students from area high schools average over twice the total number of providers of deaf support services compared with those that don't (4.5 compared with 2.2).
- Institutions answering that they used deaf adults (other than their own employees) as role models averaged 5.1 providers of deaf support services, more than twice the 2.4 average for institutions answering they didn't use deaf adults as role models.
- ♦ Institutions offering vocational technical programs, two-year transfer programs, and liberal arts programs had *higher* numbers of deaf support service providers. Institutions not offering teacher preparation programs or professional programs had *lower* numbers of deaf support service providers.
- ♦ Two-year institutions averaged 4.4 providers of deaf support services, compared with 2.3 for 4-year institutions.

. 35

Two-Year and Four-Year Institutions

What are the major differences between two- and four-year institutions?

In general, two-year institutions seem to be more oriented to serving deaf students than four-year institutions (see Table 30, Appendix A). This could have a basis in grant funding - 73% of the 4-year institutions indicated that *none* of their budget for deaf support services was funded by grants, compared with 34% of the two-year institutions.

While four-year institutions have, on average, fifty percent more students than two-year institutions, they actually have, on average, *fewer* deaf and hard of hearing credit students (18 compared with 23 for the two-year institutions). The average number of total deaf employees is virtually the same for two-year and four-year institutions.

Twenty-one percent of respondents from the two-year institutions indicated active recruitment of deaf employees, compared with 12 percent for the four-year institutions.

While deaf and hard of hearing students are consulted by both two- and four-year institutions with approximately the same frequency (63%), two-year institutions consult deaf and hard of hearing individuals in the community as well as deaf and hard of hearing employees with greater frequency than do four-year institutions (42% compared to 25% and 35% compared to 23%, respectively).

Two-thirds of the two-year schools confirmed recruitment of deaf students from area high schools, compared with 37% of the four-year schools.

Interpreters are provided less frequently at four-year schools. Seventeen percent of the four-year schools said interpreters are never provided for campus-wide events, compared with 10 percent for two-year schools.

Challenges faced by both two- and four-year schools were rated similarly, with the exception of the lack of basic skills of deaf & hard of hearing students, which was rated higher for two-year schools.

Figure 29 on the following page shows which services were more prevalent at four-year institutions. Figure 30 on the following page shows which services were more prevalent at two-year institutions.

Care day of Command Commission for the D	Deaf/Deaf Professionals in Higher Education		

June 1997

Dear Colleague:

Your help is requested on a study conducted by the Johnson County Community College (JCCC) Office of Institutional Research in conjunction with Kim Brown, Education Specialist with Gallaudet University Regional Center at JCCC, and Rick Moehring, JCCC Counselor. This study will result in enhanced information about the role of the deaf professional in higher education. It will also generate summary information about support services for deaf & hard of hearing students at hundreds of institutions across the U.S. Your participation is vital to the success of this project.

The enclosed questionnaire should be completed by the person in charge of and/or most knowledgeable about deaf & hard of hearing programs at your institution. If you are not that person, please forward this entire communication to the appropriate person.

Please fill out the survey completely and accurately and return it in the enclosed postpaid envelope **no later than July 1**, 1997. If you have any questions about any aspect of this project, please contact me at the Office of Institutional Research (913/469-8500 ext. 2443).

If you would like to receive a copy of the final report from this study, please provide your name and address on the last page of the questionnaire.

Thank you for your contribution to this important project.

Sincerely,

Shirley G. Weglarz, Research Analyst Office of Institutional Research
